

COAST BANKSIA WOODLAND PROJECT

Indigenous Plants #1

Many of the indigenous plants found within the Shallow Inlet Coastal Reserve and along the Roy Henderson Trail are typical of those found in the ecological vegetation class of Coast Banksia Woodland and Coastal Dune Scrub. This information sheet lists many of the plants seen when walking from Shallow Inlet along the trail.

The one-hectare project site is being rehabilitated and will be revegetated with local indigenous plants.

Many weeds have been removed from the project site and ongoing weed control will be required. The site is on the southern (picnic table) side of the trail. You will notice that the northern side of the trail has many more weeds.

Funding for rehabilitation and planting has been provided by the Victorian Government through Coastcare Victoria, with volunteers leading and undertaking the works.

1 Dusty Daisy-bush
Olearia phlogopappa

2 Common Boobialla
Myoporum insulare

3 Coast Spear-grass
Austrostipa stipoides

4 Coast Teatree
Leptospermum laevigatum

5 Coast Beard-heath
Leucopogon parviflorus

6 Coast Wattle
Acacia longifolia

7 Coast Sheoak
Allocasuarina verticillata

8 Manna Gum
Eucalyptus viminalis ssp. pryoriana

Coast Banksia Woodlands Project : Indigenous Plants #1

9 Coast Banksia
Banksia integrifolia

10 Bracken Fern
Pteridium esculentum

11 Seaberry Saltbush
Rhagodia candolleana

12 Sweet Bursaria
Bursaria spinosa

13 Swamp Paperbark
Melaleuca ericifolia

14 Bower Spinach
Tetragonia implexicoma

15 Small-leaved Clematis
Clematis microphylla

16 Sea-box
Alyxia buxifolia

17 Austral Stork's-bill
Pelargonium australe

The information for this Indigenous Plants sheet for CBWP has been collected by volunteers and may need to be updated as new information becomes available. **Last updated: October, 2023**
