

COAST BANKSIA WOODLAND PROJECT

Indigenous Plants #2

Many of the indigenous plants found within the Waratah Bay-Shallow Inlet Coastal Reserve are typical of those found on the Ecological Vegetation Classes - Coast Banksia Woodland and Coastal Dune Scrub. Many of these plants can be observed growing beside the Roy Henderson Trail as it meanders through the reserve from Manuka Street, Sandy Point to Shallow Inlet.

This indigenous plant information sheet identifies and illustrates some of the smaller plants which flower in Spring. The sheet was designed for an activity which started on the north side of the road at the second access gate near the 80 km sign. Good examples of the listed plants are found in order if starting at the gate and walking towards the inlet. This sheet can be used in conjunction with *Indigenous Plants #1* which illustrates some of the larger trees and shrubs found in the reserve.

1 Silky Guinea-flower
Hibbertia sericea

2 Coast Sword-sedge
Lepidosperma gladiatum

3 Austral Bugle
Ajuga australis

4 Kidney Weed
Dichondra repens

5 Coast Pomaderris
Pomaderris paniculosa

6 Blue Bottle-daisy
Lagenophora stipitata

7 Bassian Dogwood
Pomaderris oraria

8 Love Creeper
Comesperma volubile

Coast Banksia Woodlands Project : Indigenous Plants #2

9 Native Raspberry
Rubus parvifolius

10 Australian Hound's Tongue
Cynoglossum australe

11 White Elderberry
Sambucus gaudichaudiana

12 Kangaroo Apple
Solanum aviculare

13 Coastal Flax-lily
Dianella revoluta

14 Bidgee-widgee
Acaena novae-zelandiae

15 Running Postman
Kennedia prostrata

16 Coast Swainson-pea
Swainsona lessertiifolia

17 Coast Ballart
Exocarpos syrticola

The information for this Indigenous Plants sheet for CBWP has been collected by volunteers and may need to be updated as new information becomes available. **Last updated: November, 2023**
